

# Plus Minus

Problem Submissions Leaderboard Discussions Editorial

Given an array of integers, calculate which fraction of its elements are *positive*, which fraction of its elements are *negative*, and which fraction of its elements are *zeroes*, respectively. Print the decimal value of each fraction on a new line.

**Note:** This challenge introduces precision problems. The test cases are scaled to six decimal places, though answers with absolute error of up to  $10^{-4}$  are acceptable.

## Input Format

The first line contains an integer, N, denoting the size of the array. The second line contains N space-separated integers describing an array of numbers  $(a_0,a_1,a_2,\ldots,a_{n-1})$ .

#### Output Format

You must print the following 3 lines:

- 1. A decimal representing of the fraction of positive numbers in the array compared to its size.
- 2. A decimal representing of the fraction of *negative* numbers in the array compared to its size.
- 3. A decimal representing of the fraction of zeroes in the array compared to its size.

## Sample Input

#### **Sample Output**

0.500000 0.333333 0.166667

## **Explanation**

There are  $\bf 3$  positive numbers,  $\bf 2$  negative numbers, and  $\bf 1$  zero in the array.

The respective fractions of positive numbers, negative numbers and zeroes are  $\frac{3}{6} = 0.500000$ ,  $\frac{2}{6} = 0.333333$  and  $\frac{1}{6} = 0.166667$ , respectively.
